

User Story ID	As a <type of user>	I want to <perform some task>
1	Scrum Master	view the availability of all team members in a single dashboard
2	Scrum Master	automatically track task completion and sprint progress
3	Scrum Master	be notified when tasks are blocked or overdue
4	Scrum Master	the system to generate sprint summary reports
5	Product Owner	view all user stories with their current development status
6	Product Owner	define and prioritize product backlog items
7	Developer	implement secure login using user ID, password and OTP.
8	Developer	Implement proper error handling and logging.
9	Developer	Optimize the application's performance and fix issues
10	Developer	Follow coding standards and best practices
11	Developer	design and implement a role-based access control (RBAC) system
12	Developer	implement an audit trail for critical user actions
13	Tester	validate application functionality
14	Tester	log and track defects with severity and priority
15	Tester	perform regression testing after every code change

so that I can <achieve some goal>

quickly schedule emergency meetings without issues and delays.

present accurate status updates to the client.

intervene early and resolve issues.

stakeholders can clearly understand team velocity and delivery status.

track progress and plan upcoming releases

the team delivers maximum value to customers

Our team can ensure only authenticated users can access the system

Our team can Easily identify and fix issues in the application.

Improve system efficiency and user satisfaction

Ensure code quality and maintainability.

different users (admin, manager, user) can access only the features permitted to their role, improving system security and usability

all important activities can be tracked for accountability and compliance

detect defects and bugs early.

fix critical banking issues before release.

existing banking functionalities are not affected
